The First and Only White Seed Grown Impatiens

1043—PARK'S SNOWFLAKE

Pure white, silken textured floral perfection exists in each sparkling Snowflake flower as it hovers above the emerald green of the foliage. An occasional plant will produce flowers with a tinge of pink so delicate it seems painted by a fairy's brush, but most are perfectly pure white.

Snowflake will produce a veritable snowstorm of flowers throughout the summer in shade. In height, it overlooks Impatiens Scarlet Baby and makes a striking contrast with it to brighten any shady nook. Pot a few plants for window or greenhouse, they'll bloom all winter. We are proud of this cool appearing horticultural triumph, and you will be too.

Supply quite limited. Pkt. (20 seeds) 50c; 50 seeds \$1.00.

PARK'S PERENNIAL FLOWER SEEDS

for Permanence and Charm

These are valuable subjects of the flower garden, as most of them are not only showy and beautiful when in bloom, but will do service year after year for a long period, enduring cold, excessive rain and drought, regardless of neglect and improper attention.

Directions for making outdoor beds and sowing seeds are sent on request with any order.

Hp. HARDY PERENNIALS are hardy plants which will live and bloom every year for a long period. Plants grow to the flowering stage each year and die down again to the roots which remain alive but dormant until the next season. They are very valuable for borders and cut flowers, and once established require less care than the annuals.

Hb—HARDY BIENNIALS are those which bloom the second year from seed, then die. For a continuous display of this type, seed must be sown every year.

Sowing Perennial Seeds

In the North perennial seeds may be sown advantageously in June and July, or later in coldframe or hotbed. See that the seedbeds do not dry out and that the sun does not shine directly upon them. In states extending southward the beds should be prepared in summer and let stand until the later part of August or September when sowing should be done.

To prepare the seed-bed dig up the soil to a depth of 2 feet, thoroughly incorporate well rotted compost and rake over several times. Saturate with water and allow to stand until weed and grass seeds spring up and are destroyed before planting.

When ready to plant, rake over the prepared seed-beds carefully to loosen the soil. Sift a 2" layer of mixed loam and well rotted compost over the top. Press the beds firm. Water thoroughly and let stand until the following day. Now, press shallow rows with the angled edge of a board and sow the seeds evenly and thinly.

Cover small seeds scantily, if larger cover twice the depth of their thickness with sifted soil. After sowing, water carefully and thoroughly with a fine spray. Cover with light boards that will shed the rain. Remove these coverings as soon as the seeds begin to sprout. Each day the beds must be watered thoroughly. As soon as the seedlings appear turn the boards up and support so as to protect the beds from direct rays of the sun. For winter covering, a 6" layer of straw, hay or manure is used in order to protect the plants.
